

Amendments to the Abstract:

Please replace the paragraph beginning with “A system and method...” and ending with “...is also described.” with the following amended paragraph:

A system and method for simultaneous delivery of a plurality of independent blocks of 500 MHz digital broadcast television services, stacking a plurality of RF blocks on a plurality of spectrally sliced WDM optical bands. The method for delivering a plurality of video blocks to a user terminal serviced by a remote node comprises the steps of receiving, by a first WDM, a broadband signal from a broadband signal source, separating, by ~~said~~ the first WDM, ~~said~~ the broadband signal into a plurality of optical bands, modulating each of the plurality of optical bands with a composite signal representing data in a plurality of independent RF blocks to form a plurality of modulated signals, forwarding ~~said~~ the plurality of modulated signals to a second WDM to form a combined broadcast signal, transmitting ~~said~~ the combined broadcast signal over feeder fiber to a remote node, selecting a RF block for distribution over a distribution fiber to a conventional satellite set-up box at a user's site and forwarding ~~said~~ the selected RF block to ~~said~~ the user's site. A novel method and system for reducing spontaneous beat noise is also ~~described~~ disclosed.
